Seung Gun Lee
CEO, Toss bank
ir@toss.im

Dear Seung Gun Lee,

I had a passion early on when I enrolled at Kyung Sung University, especially when I registered for the very first time, the business computing class. After my exposure to this field of data analysis and database management, I became curious about various job openings at Toss Bank. As I was a proud user of Toss, the customer experience and innovation such as Toss FacePay grew my eagerness to apply and join the company.

I came to realize that the values and work environment at Toss bank matches my life. I truly am not someone who favours hierarchy, but Toss bank is literally run by makers, not managers. They prioritize user experience and ranked #1 Korean best bank 2 years in a row. It gained popularity and won the loyalty of foreign users as a trusted bank. When I used Face pay for the first time, I found it stunning and it worked without any bugs. At that moment, I saw the potential of this fast growing company. This encouraged me to be a part of similar innovations.

In order to gain practical experience, I analyzed several banking and retail sales datasets and worked on them. From cleaning the dataset, to visualizing different graphs, I took note of useful insights and shared my projects onto Github. I furthermore, started learning LLMs and machine learning. I built a program that identifies an object being shown on camera and tells the name of that object based on trained data. I can contribute to further growth of the company by suggesting new innovative ideas to improve the service and grow deep into Korean market.

I am a strong believer that my skills and experience can help me contribute a lot to Toss bank's future. My continuous self-learning and creative thinking make me stand out as a candidate fit for the role. If given the opportunity, I am ready to do my best to contribute to your company.

Sincerely,

Jonibek Juraev
